Minimum Weights

G'day

From January 2024, the 'Historic Production Based Eligibility Committee' of Motorsport Australia will introduce minimum weights for Group N cars. Minimum weights will apply in conjunction with current rules about Group N cars that compete in Australia:

- have bodywork and body fittings as supplied by the manufacturer;
- contain components that are compliant with the Specification Sheet for that vehicle.
- not have modification(s) that are outside the Group regulations.
- compete in a condition, mechanically and visually, compatible with the period of racing being portrayed.

These rules and minimum weights are unique to Australia.

The 'Historic Production Base Eligibility Committee' together with the AHTCA are proud to present the updated Minimum Weight/Race Weights for Group N cars.

A special thanks to AHTCA delegates for their mammoth task of identifying the kerb weights, and then analysing several scenarios/formulas before coming to a solution agreed by all as the best method.

We are very happy to say ALL cars have been treated equally.

All vehicle kerb weights have been sourced, and are included in the document linked below. Where 2 or more kerb weights were found for the same vehicle, the lighter one has been used.

Just to clarify - the 'Racing Weight' is as the car would come off the track, less driver and helmet.

You can request to review your weight, but you **must supply a credible source document**

If you have any question(s) after having read the documents, please contact your AHTCA rep below.
